CHEM 280 focuses on exploring the culture of science in Germany. This course is designed for any level of student within any academic area of study. This course will count towards elective credit. Students will register for the course in Spring 2013 and have several pre-trip meetings. Travel will be in May 2013.

**Purpose of the course:** The course is designed to introduce students to the nature of scientific study in another country through universities, museums, research centers, and production facilities. Students will also be exposed to the impact of regional policy on the development of technical industries. This course will also expose students to the breadth of careers in the STEM fields.
