Installing and Running

Click Next to start installation.
Check the radio button beside “I accept the terms in the license agreement” and click Next.

Click Next.
Click Install

Check “Launch Microsoft AntiSpyware.”
Click “File” and “Check for updates…”

When it is finished updating, click Close.
Click “Run Quick Scan Now” to start the scan.
If it found any spyware threats, click “View Results” to continue.
If anything is detected about VNC, make sure it is “Always Ignored” by selecting it in the drop-down menu. The Helpdesk uses VNC to connect to users’ computers who are having trouble. Anything else needs to be removed. Click “Continue.”

If VNC is the only thing found, click yes if the message above pops up.

Click “Yes.”
This is helpful, click “Configure Now…” to continue.

Verify this information and click Continue.

Click the “X” in the top right corner to exit.
Microsoft AntiSpyware will run when Windows starts up. It will automatically update itself with the latest definitions. Right-clicking on the icon will bring up the menu.
