Installing and Running Spybot Search & Destroy

Click on the link to download.

Click Run or Open when it asks.

Click Run to start installation

Click OK

Click Next
Click the radio button next to “I accept the agreement” and click Next.

Click Next.
Click Next

Uncheck “Create a Quick Launch icon” and click Next
Click Install

Click Finish and Spybot will automatically startup.
Click OK if this pops up.

Check “Do not display…” and click OK
Click Next

Click “Search for updates” then “Download all available updates” and then Next.
Click “Immunize this system” and Next when it’s finished.
Click “Start using the program”

Whenever you run Spybot, be sure to UPDATE EVERYTIME you run the program.
(The next two steps are for updating Spybot when you run it from the icon on your desktop.)
Click “Search for Updates.”

To update, click “Search for updates,” then check all the new updates, if any, then click “Download Updates” to download and install them.
Click “Check for problems.”
Make sure all of the detected items are checked and click “Fix selected problems.”

This may pop up and could take a minute or more.

Click “Yes” to remove the items.

Click “OK.” You can now close the program.

If some things cannot be removed, it will run at the next restart and checked all the items and remove them.
