

## Connecting to SkyNet wireless networks

When connecting to the SkyNet wireless network three pieces of information will be required. The first piece is your username which will be the same as the one that is used to login to the UTM homepage. The second piece will be your password, which is also the same as the UTM homepage. The last piece of information is the logon domain. The logon domain will vary depending on whether you are student, staff or faculty. The domain list is as follows:

- Students: MAR-UT-LAB
- Staff: MAR-UT-STAFF-01
- Faculty: MAR-UT-FAC-01

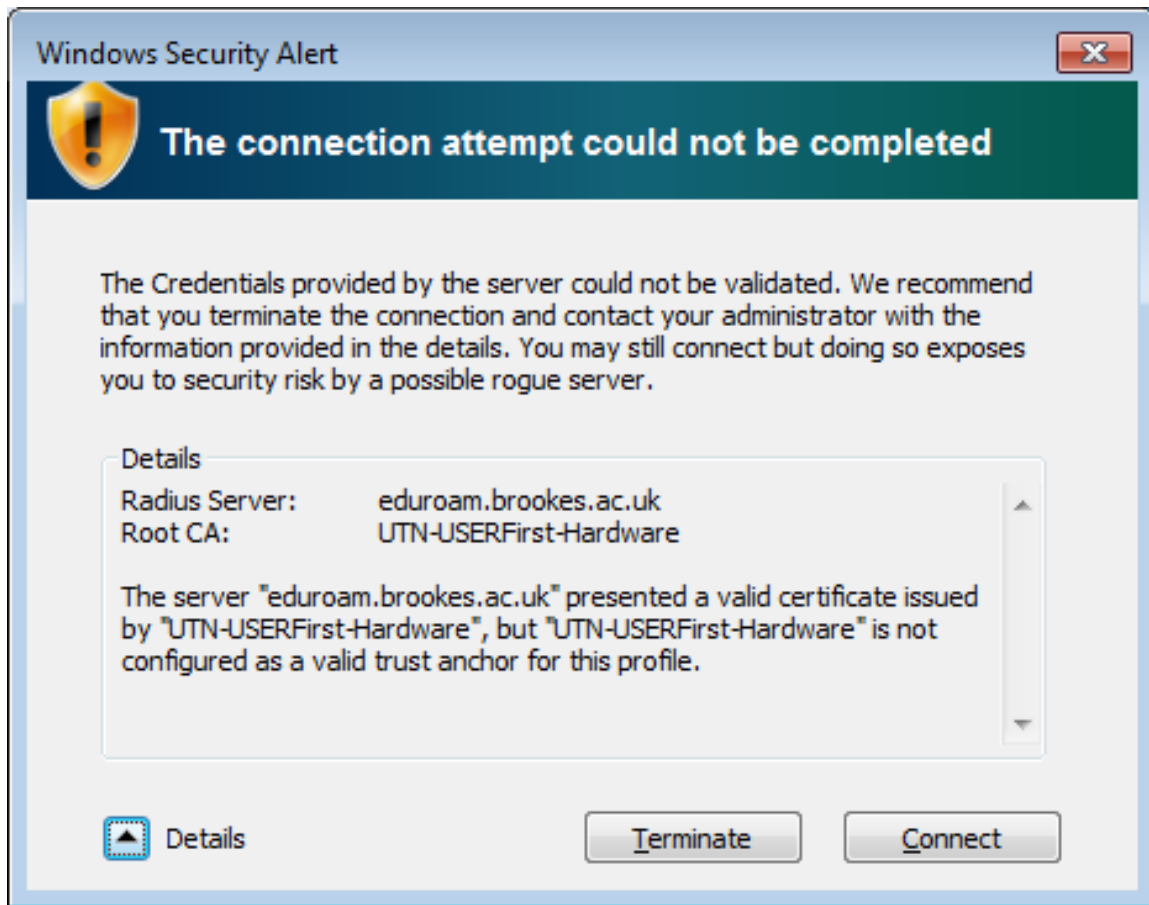

To connect, first you must select the appropriate network. Students will use SkyNet for Students and faculty and staff will use SkyNet for Faculty/Staff. Once the network is selected, it will prompt you for login credentials. The prompt will look similar to this.

When entering your user information, the username should be in the format domain\username.

**Example:** mar-ut-lab\johadoc

Once that is entered, type in your password in the appropriately named field and click OK. If you entered your credentials correctly, the computer should continue connecting to the network. It is possible that you may encounter the following prompt after entering your credentials successfully.

If this happens, simply click connect to continue. From this point your computer should finish connecting and display a prompt stating that it connected successfully.
