**Hands-on Professional
Development Workshop
for West TN Teachers**

WATER QUALITY MONITORING SCIENCE LAB TRAINING

Topics:

Science and engineering practices, water quality, hydro-sphere, ecosystems, chemical reactions, adaptation, collection and data interpretation, working with scientific equipment, recognizing variables and exploring STEM careers.

Outcome:

Teachers should leave with a sense of confidence to lead science labs using the EarthEco test kits. These kits are designed to enhance student learning and critical thinking and increase interest in the area of science.

"The TVA Water Quality Teacher Training is a 'must' for teachers of older elementary students. The equipment used, knowledge given, and experiments themselves are so understandable, without much prepping at all! This program would be a breeze to teach because there is a PowerPoint to guide you. A well-known local water source makes it even more exciting and relevant. So much of this info is covered in our standards. I would love to switch to a program that is this easy to prepare, and such a great learning tool. Take the training!"

Lori Crabtree, 5th Grade Science Teacher, Ft. Payne, AL
