Lee Bennett  
Electronics Technician  
School of Engineering Technology and Engineering  
Campus

Dear Lee:

On behalf of our Department let me express our most sincere appreciation for your efforts during the month you assisted us this summer. It had been my intention initially to count the number of items that you and Professor Houff identified as needing repair and the number you were able to return to operating condition. While some of the repairs were only replacing switches, line cords, etc., several required significant "trouble shooting." We were very fortunate to have someone with your ability and dedication to tackle these problems. I was very impressed with the speed and insight you demonstrated in repairing the pieces of equipment with the more subtle problems.

While there are still a very large number of items to be repaired and we did not have the opportunity to pursue any of the demonstration projects or laboratory upgrades we had discussed, what you did accomplish in the limited time available was remarkable. The impact on our program this year will be very significant and you have our most sincere thank you.

It was a great pleasure working with you and I look forward to the opportunities to pursue some of the possible demonstration projects and laboratory upgrades (seismometer station, weather display, new data acquisition stations, Jacob's ladder demo. etc.) with your guidance. We sincerely hope that a similar arrangement for next summer can be worked out. The benefits to our program of the arrangement this summer have be most important.

Sincerely;

David S. Loebbaka  
Professor and Chair

Campus Mail

Dear Lee:

This is just a brief note to acknowledge gratefully your help with the Turner Filter Fluorimeter Model 111.

I have always admired your way with the electronic stuff on campus, having seen you 'fix' a lot of things as the electronic handyman. As you know I was getting awfully frustrated when the fluorimeter here just won't work. It was a sigh a relief when you finally got it working.

We are proud of your expertise and just the right touch. Thank you for your timely and crucial help.

Sincerely,

S. K. Airee  
Professor

Mr. Mike W. Abney  
Computer Systems Specialist  
Computer Center  
127 Cooper Hall  
CAMPUS MAIL

Dear Mike:

Despite our computer equipment, many of us in political science use our electric typewriter extensively. Our IBM has needed considerable repair, and Mr. Bobby Lee Bennett has been very conscientious in making many visits to keep the machine functioning. All of us appreciate this outstanding service.

In addition, Lee has been able to find us a newer IBM electric typewriter that has been transferred to our office. This will serve us well and save the department funds. Otherwise the department would have had to purchase a newer used machine.

Please convey our sincere appreciation to Lee for not only giving our department superb repair service but in allowing for the transfer of this IBM typewriter. All of use are most grateful!

Sincerely,

Ted Mosch, Ph.D.  
Professor of Political Science

blt

Thank you, Lee,  
Ted
