

```
<HTML>
<HEAD>
<TITLE>Text goes here</TITLE>           Title shows up in upper left of browser
</HEAD>
<BODY>
Everything else goes here
</BODY>           Tags with "/" mean "end of"
</HTML>
```

*Hypertext link:*

```
<A HREF="http://www.utm.edu">UTM Home Page</A>
```

*Hypertext link that opens in a new window or tab:*

```
<A HREF="http://www.utm.edu" target=_blank>UTM Home Page</A>
```

*Insert a photo/graphic (in this example, named sample.jpg):*

```
<IMG SRC="sample.jpg">           Add WIDTH=50% to display 50% smaller
```

*Hyperlink that uses a photo/graphic instead of hypertext.**Add the border="no" to avoid a blue outline around the photo/graphic:*

```
<A HREF="http://www.utm.edu"><IMG SRC="sample.jpg" border="no"></A>
```

```
<BR>           New line, without a blank line in-between
<P>           "Paragraph": new line, WITH a blank line in-between
```

```
<H1></H1>     "Headline" size 1 (largest). Also acts like a <P> tag follows.
<H2></H2>     "Headline" size 2 (smaller). Also acts like a <P> tag follows.
<H3></H3>     "Headline" size 3 (smaller). Also acts like a <P> tag follows.
```

```
<B></B>       Bold
<I></I>       Italic
```

```
<CENTER></CENTER>   Center
```

```
<UL>          Begin unordered list
<LI>          List element
</UL>        End unordered list
```

```
<OL>          Begin ordered list
<LI>          List element
</OL>        End ordered list
```

```
<TABLE WIDTH=100%>           Begin table. Add BORDER=# for outlined border
<TR VALIGN="TOP">           Begin table row, vertical align at top
<TD>                         Begin table detail (column). Can add WIDTH=###
</TD>                         End table detail (column)
</TR>                         End table row
</TABLE>                       End table
```

```
&#160         Acts like a blank. Use for extra spacing. Means "ASCII character 160".
&copy         Displays the copyright symbols (circle-C)
&amp         Ampersand (&) symbol
&gt           Greater Than (>) symbol
&lt           Less Than (<) symbol
EXAMPLE:      &ltP&gt would display as: <P>
```

```
<PRE>         All lines between <PRE> and </PRE> automatically start on new lines, just as
</PRE>        typed in. Typically displays in Courier (typewriter) font. Good for lyrics, etc.
```

```
<SMALL></SMALL>   Reduces size of text to a smaller "fine print".
```
