

CSCI 490: Autonomous Mobile Robotics

Assignment Name:

Assignment Number:

Group Members:

Project Description:

*A brief description of what was asked of you, and the general constraints of the problem.*

What Worked (Source and/or Build):

*Describe things that you tried either in the hardware or software (algorithmically, data structure choices, API choices) that work well (and likely made it into the final product) under the assignment conditions.*

What Didn't Work (Source and/or Build):

*Describe things that you tried either in the hardware or software (algorithmically, data structure choices, API choices) that didn't work well under the assignment conditions.*

What I feel that I learned from this assignment:

*Describe any algorithm/data structure insights, features of the language, or creative uses of the hardware that you picked up during the assignment.*

*Note: This portion of the write-up should not exceed 1-2 pages.*

## Build Details

*Please provide one or more representative images of your configuration with a description on this page (most likely a page or two).*

Source

*Please include documented source(s) here (one file per page).*
